

Trading APIs from Brokerage Technology Solutions

Our full suite APIs, backed by expert Professional App development Services (ProServ), enable you to build unique trading experiences on top of very powerful trading engines. You can leverage the APIs to create your own discount or full-service broking offering.

Trading APIs

You can use our Trading APIs to build your unique market offering. What's more, our expert App-Development Services, backed by more than two decades of capital market experience can help you design and develop engaging User Experiences for your trading app.

The Trading APIs are a combination of Cloud REST & Socket based APIs, fine-tuned to power a supercharged trading experience.

The Socket APIs handle ultra-low latency streaming market feed data and interactive data like order & trade confirmations.

The Cloud REST APIs cater to all trading app needs like login, user profile, portfolio, holdings, order life cycle management and many more.

Login

User Profile

Portfolio

Holdings

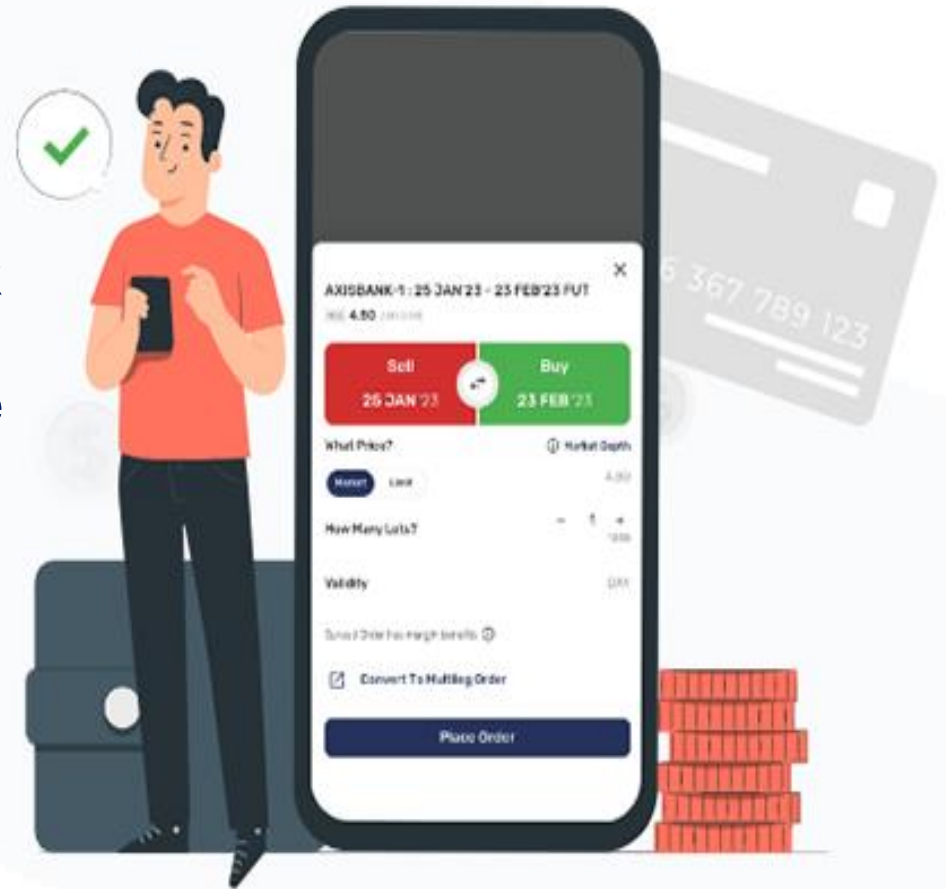

Trade Placement

Our trading SDKs help you deliver an embedded trading experience in your Super Apps.

Supporting APIs

Our Payment Gateway API, facilitate seamless PG integrations & fund update And User Management API for real time syncing between Front Office and Back Office and Messaging APIs for app notifications help complete in-app user journeys.

Backed by Proven Trading Cores

The APIs are backed by our proven core Trading engines, consisting of OMS (Order Management System) with ultra-low latency order message (order/trade) throughput & infinite scaling to handle any volume loads and RMS with most extensive risk rule engine.

They facilitate trading in all exchange listed trading instruments & segments across NSE, BSE, NCX, NCDEX and more. We constantly keep upgrading our trading cores to cater to the ever-evolving regulatory landscape. You also get cloud hosting services and benchmark customer support to have a hassle-free ownership experience.

Ease of Connectivity with Open APIs

Cutting edge innovations are happening in the trading ecosystem, with Fin Techs coming up with value added broking services like wealth products, portfolio advisory, thematic investments, automated strategies and more. Your clients have turned a leaf by designing their own trading strategies. We have made it super simple for them to connect to your trading systems with open APIs: Connector APIs for Fin techs and B2C APIs for individual investors, helping them seamlessly integrate to yours trading systems.

Get in touch with us to explore the rich suite of Trading APIs.
